Northern leopard frog

Rana pipiens

FAST FACTS

1. These frogs live all across North America. In British Columbia, and many areas west of the Rocky Mountains, they have been disappearing. Frog biologists at the Vancouver Aquarium have been raising and releasing tadpoles into places these frogs used to live.

2. The very first frogs lived about 190 million years ago, at the same time as many dinosaurs. Why do you think frogs survived when so many dinosaurs went extinct?
